About me

I am in the third year of Information Systems Engineering, I also work on projects to improve my skills as a frontend developer. I have the ability to solve problems and a good disposition to work in a team.

Work experience

I have gained experience working on personal projects which you can see in my portfolio.

I am looking for my first formal experience in the IT environment, either in the form of an internship or effective work, to prove that I can be a useful member of a team.

Academic data

Ing. Emilio F. Olmos IPET 50

Electronics Technician - Marzo 2016 / Diciembre 2022

I reached an average of 8.78, becoming escort of the Argentine flag. I discovered my interest in programming and since then I have sought to continue acquiring new knowledge through courses and talks. During the seventh year, we had to develop different projects where we had to look for information on how to carry them out, beyond having the guidance of a teacher, we had to investigate on our own.

UTN - Regional University San Francisco

Information Systems Engineering - Marzo 2023 / Present

I start studying the third year a day, in parallel with the degree I train independently as a frontend developer and work on projects to give visibility to my skills.
